Up Ram

We own 7 Body Buddy Speed Stations

"This unit does exactly what they said it would do and then some. The Body Buddy has exceeded our expectations. Each technician's job has been made easier, while becoming more productive. We own two full size frame machines; the addition of the Body Buddy Speed Station could allow me to sell one of these frame machines. This is without a doubt the best all-in-one unit for any collision repair business.

- Jay Millard, Collision Center Manager, North Charleston, South Carolina

THE ALL-IN-ONE RACK

There are two significant problems facing our industry today: (1) most hard hits being totaled; and, (2) the poor economy is hindering profitability. Clarence Brewer, Sr. has used his 30 years of experience designing equipment to come up with a solution – The Body Buddy. Because of these problems and the fact that gas prices are driving more fuel-efficient cars into the market, the business is drastically changing. It consists mainly of light hits on smaller vehicles that don't require the slow process involved with bulky frame racks. The Body Buddy is an efficient alternative that gives you the ability to fix the majority of all hits without even leaving your bay. Plus, its effective size and economic price allows one in **every** bay. Your Body Buddy can allow you to complete the entire repair in the time it takes your competition to tie down to a frame rack and it also relieves the bottleneck on your frame rack during busy times. Call today for your information kit!
